## FORMULINK Custom Formulary Database

Superior clinical content customized to  
your hospital's formulary and policies

Your hospital's pharmacists and other clinicians are under pressure to give the right drug to the right patient at the right time. And ideally, they'd prescribe and dispense according to the hospital's formulary.

You can make that happen with FORMULINK, a customizable database that keeps the formulary front and center for your clinical decision makers.

Now, FORMULINK is available within UpToDate® for hospitals that have UpToDate and Lexicomp®. This easy-to-use solution has been designed to simplify and improve the drug ordering process to support clinicians. It can also help your P&T Committee communicate the hospital's policies and procedures more effectively.

### FEATURES

- FORMULINK's database is fully integrated within Lexicomp. Your clinicians can access it right in their workflow from laptop or mobile devices
- If you have UpToDate and Lexicomp, you can integrate FORMULINK into UpToDate
- You can update your formulary easily at any time
- You can access reports from within FORMULINK to inform decision making

### BENEFITS

- Downloadable formulary information to handheld devices
- Better operational efficiencies
- Improved communication with prescribers
- Customizable content, features, and web links to hospital policies and procedures
